LightningVolt™

Lithium LiFePO4 Battery for Commercial Vehicles & Heavy-Duty Electric Auxiliary Power Units

- Plug & Play Installation
- Longer-Lasting Lithium Power
- Freeze-Cycle Tested
- Works in Parallel with Starter Batteries

12V **100Ah** **1300Wh**

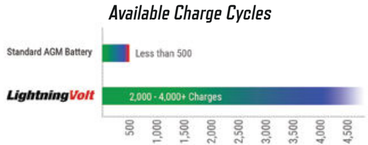
Your long-haul truck's electric APU is designed to cut fuel costs and idle times, and increase the comfort of your sleeper cab. But does it always live up to expectations? Many of the limitations of electric APUs come from using lead-acid or AGM batteries. Lead-acid batteries are effective as starter batteries, providing short, large bursts of energy. They are less suited to deep-cycle applications like electric APUs, which need a steady, consistent current to run appliances and electronics. By upgrading your house (hotel) battery bank from lead-acid batteries to **LightningVolt**™ lithium batteries, you could see long-term fuel savings and significantly reduce wear and tear on your engine components.

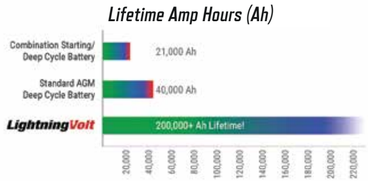
- Electric APU, idle reduction upgrade
- Built for repeated deep discharge
- 10× longer lasting compared to lead-acid
- 2× Longer runtime without idling or load shedding
- Power 2× more accessories without idling
- Maintains starter battery state of charge

Longer Runtime, No Need to Plug-in

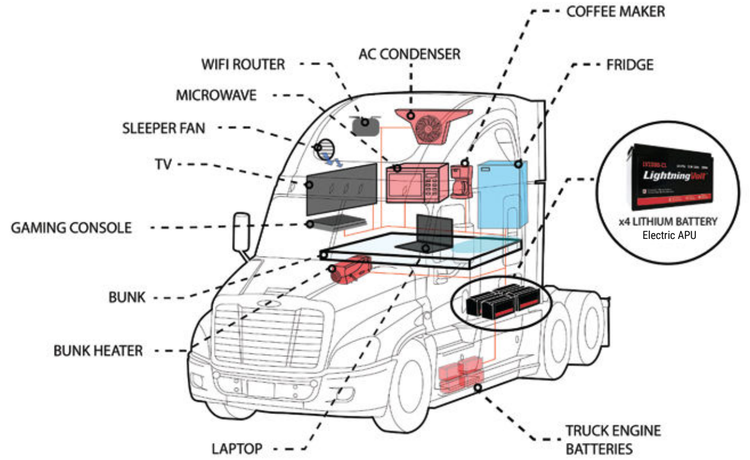
Specially designed for Electric APUs

LightningVolt™ is an upgrade for heavy-duty electric auxiliary power units (APU). It provides 2× more usable power for longer runtime of auxiliary accessories without idling or burning extra fuel.





2× more power for ALL your sleeper accessories



LightningVolt™ is designed and tested to work with electric auxiliary power units.

- Bergstrom NITE
- Carrier ComfortPro
- Freightliner Battery Powered HVAC system (BPHS)
- Freightliner Dual HVAC System
- Freightliner ParkSmart
- Kenworth Idle Management
- System (KIMS)
- Mack Truck Idle-free
- Navistar MaxxPower
- Peterbilt SmartAir
- Phillips & Temro Idle Free System
- Thermo King TriPac Envidia
- Volvo Parking Cooler System
- Western Star RestStar
- and more!
